Ending Spam: Bayesian Content Filtering And The Art Of Statistical Language Classification

Synopsis

Join author John Zdziarski for a look inside the brilliant minds that have conceived clever new ways to fight spam in all its nefarious forms. This landmark title describes, in-depth, how statistical filtering is being used by next-generation spam filters to identify and filter unwanted messages, how spam filtering works and how language classification and machine learning combine to produce remarkably accurate spam filters. After reading *Ending Spam*, you'll have a complete understanding of the mathematical approaches used by today's spam filters as well as decoding, tokenization, various algorithms (including Bayesian analysis and Markovian discrimination) and the benefits of using open-source solutions to end spam. Zdziarski interviewed creators of many of the best spam filters and has included their insights in this revealing examination of the anti-spam crusade. If you're a programmer designing a new spam filter, a network admin implementing a spam-filtering solution, or just someone who's curious about how spam filters work and the tactics spammers use to evade them, *Ending Spam* will serve as an informative analysis of the war against spammers.

TOC

PART I: An Introduction to Spam Filtering

Chapter 1: The History of Spam

Chapter 2: Historical Approaches to Fighting Spam

Chapter 3: Language Classification Concepts

Chapter 4: Statistical Filtering Fundamentals

PART II: Fundamentals of Statistical Filtering

Chapter 5: Decoding: Uncombobulating Messages

Chapter 6: Tokenization: The Building Blocks of Spam

Chapter 7: The Low-Down Dirty Tricks of Spammers

Chapter 8: Data Storage for a Zillion Records

Chapter 9: Scaling in Large Environments

PART III: Advanced Concepts of Statistical Filtering

Chapter 10: Testing Theory

Chapter 11: Concept Identification: Advanced Tokenization

Chapter 12: Fifth-Order Markovian Discrimination

Chapter 13: Intelligent Feature Set Reduction

Chapter 14: Collaborative Algorithms

Appendix: Shining Examples of Filtering

Customer Reviews

Ending Spam from Mr. Zdziarski is a well written BASIC and easy to understand INTRODUCTION to get a technical overview of todays spam fighting solutions on the market. Also it is written on the cover that it is f.e focused towards developers, network admins etc. I would consider the target customer to be IT Managers, or other curious people who want to get an overview. That's what it does and it does it very well in my eyes. The book provides simplified, abstract overviews of some available spam filters solutions. The book is provided into 3 parts- An Introduction part to spam filtering (Chapter 1-4)- A part describing "Fundamentals of Statistical Filtering" (Chapter 5-9)- and the third part describing "Advanced Concepts of Statistical Filtering" (Chapter 10-14). It's a bit confusing that Chapter 4 has the same title than Part II. So perhaps Chapter 4 should have been part of "Part II" ? The Chapters which I found most interesting were: Chapter 4 "Fundamentals of Statistical Filtering" Chapter 7 "The Low down dirty Tricks of spammers" Chapter 9 "Scaling in Large Environments" I am sure the author could have easily filled the book with Chapter 7 alone. The book is very entertaining and has a nice motivating writing style. You might at times find some rant about the spammers which I have chosen to ignore as it doesn't contain any valuable information or anything which I didn't know already. While I might agree to some of the author's views, I believe that the rant does unfortunately do exactly the opposite in my eyes and does give spammers credit to how they do their work.
